

Slightly etching into galvanized surfaces, Natina Steel creates permanent earth-tone colors without compromising the protection of the galvanized layer. Better yet, this advanced color treatment costs FAR less than alternative colorants (i.e. vinyl coating, powder coating, and paint).

Immediately following submersion in a tank of Natina Steel, the color of this wire mesh has already changed drastically.

Natina Steel reacts with the zinc in the galvanized layer to create rustic brown colors that blend perfectly with the surrounding terrain.

**Game Fence**

- Natina Steel is used to enhance the appearance of:
- ✓ Guardrails
  - ✓ Chain-Link Fence
  - ✓ Sign Posts
  - ✓ Cable Barriers
  - ✓ Wildlife Fence
  - ✓ Isolation Casings
  - ✓ Grates
  - ✓ Trash Racks
  - ✓ Wire Mesh (for erosion control)
  - ✓ And Many More...

**Chain-Link Fence**

Visually obtrusive galvanized surfaces can blend into surrounding landscapes and virtually disappear.

Creates color that costs FAR less than typical vinyl/ powder coated chain-link and lasts FAR longer.
