

THANK YOU TO OUR SPONSOR Natina Products

By Mike Duran

Often, earthwork in the desert can leave the ubiquitous white scars on disturbed boulders, rocks and earth. Natina Products has the solution with their namesake product, Natina.

Natina is a high quality, environmentally safe desert varnish. It speeds up the oxidation process within one to two weeks returning the scarred desert to natural earth tones. Natina does not photo-degrade and is expected to last for decades.

Natina is approved for the Lake Mead Conservation Area and is currently used by the Arizona Department of Transportation and CalTrans. Locally, landscape architects can see the product at the City of Henderson's Cactus Wren Trail.

For more information on their products, please contact:
